' VISITOR IP BLOCKER BY AARON PACKARD, PMP

' For use when blocking pesky users and subnets of IP networks
' Built on 30 June 2006 and refined on 08 July 2006
' (c)2006-2012 - Aaron Packard, PMP - <http://www.aaronpackard.net/>
' Weasel with Circle and Slash image is a registered trademark owned by Aaron Packard

' BACKGROUND

' The author of this script was unable find easily obtainable pre-written ASP
' code to perform this function. The author created the necessary code and is
' offering it to anyone at no cost. This code snippet may be freely distributed
' and used by anyone. It should be noted that the author is not an expert ASP
' programmer, and if another person can develop more efficient code - good for
' them!

' GENERAL SETUP INSTRUCTIONS

' 1 Cut and paste this into a suitably named ASP file
' 2 Ensure that a suitable redirect page has been created for banned visitors
' 3 Calls to this script must be at the absolute top of every page that is intended
' to call this script
' 4 Except copyright notice and credit, all other commenting within this script may
' be removed

' SUPPORT

' You may contact the author of this script with questions
' apackard.at.aaronpackard.net

' DISCLAIMER

' NO WARRANTIES, EXPRESSED OR IMPLIED, ARE PROVIDED BY THE AUTHOR OF THIS SCRIPT
' The author is under no obligation, legal or otherwise, to respond to inquiries

' Below is where IP ranges intended to be banned from your site should be indicated
' The syntax is 'begin address octets:end address octets'
' Each range must be separated with a semi-colon (;)

' To block a single address, repeat all octets after the colon
' - example: '192.168.1.128:192.168.1.128'

' To block an entire Class-A block, use the range 0:255
' - example: '192.0.0.0:192.255.255.255'

' To block an entire Class-B block, use the range 0:255
' - example: '192.168.0.0:192.168.255.255'

' To block an entire Class-C block, use the range 0:255
' - example: '192.168.1.0:192.168.1.255'

' To block multiple blocks, use the range x:y
' - example: '192.168.12.0:192.168.22.255'

' This syntax applies to all other network classes

' BEGIN SOURCE CODE

' Note that the ranges below are for example purposes and must be replaced with the
' actual addresses.

 ranges = "192.168.2.0:192.168.2.255;10.1.0.0:10.30.255.255;192.168.14.32:192.168.14.32"

' Below is where the redirect page for banned visitors should be specified:

 BootPage = "http://www.<yourdomain>.com/<path to page>/<pagename>.html "

```
'-----  
' TO MAINTAIN INTENDED FUNCTIONALITY, ALL CODE BELOW THIS REMARK SHOULD  
' NOT BE MODIFIED.  
'-----
```

```
' Grab the visitor IP and split up into an array of octet chunks:  
  octet = split("&Request.ServerVariables("REMOTE_HOST"), ".")
```

```
' Break the ban list into a sequential array for analysis:  
  range = split("&ranges, ";")
```

```
' Run comparison for each of the ranges:
```

```
for i = 1 to ubound(range)
```

```
  addresses = split("&range(i), ":")  
  begins = split("&addresses(1), ".")  
  ends = split("&addresses(2), ".")
```

```
  ' if visitor IP falls in between a Class-A range:
```

```
    If cint(octet(1)) > cint(begins(1)) then  
      If cint(octet(1)) < cint(ends(1)) then 'Vistor restricted!  
        Response.Redirect(BootPage) ' Boot-em  
      Else  
        ' Move onto next comparison  
      End If  
      ' Move onto next comparison  
    End If
```

```
  ' if visitor IP matches a Class-A BEGIN point and falls in between Class-B ranges:
```

```
    If cint(octet(1)) = cint(begins(1)) then  
      If cint(octet(2)) > cint(begins(2)) then  
        If cint(octet(2)) < cint(ends(2)) then 'Vistor restricted!  
          Response.Redirect(BootPage) ' Boot-em  
        Else  
          ' Move onto next comparison  
        End If  
      Else  
        ' Move onto next comparison  
      End If  
    Else  
      ' Move onto next comparison  
    End If
```

```
  ' if visitor IP matches a Class-A END point and falls in between Class-B ranges:
